

A major refit of this leading law firm's offices included the installation of a large run of floor-to-ceiling storage units, finished in durable MFC. New offices were created by the use of full-height toughened 12mm glass partitioning, silicone jointed and sited into silver aluminium U-channelling. Due to the confidential nature of the business, all glazed surfaces had frosted manifestation applied, allowing both security to the occupants and for natural light to filter through. This theme was continued at the entrance.

Specially-manufactured door handles in the shape of an 'M' were installed, along with design, supply and installation of new signage running the width of the shop-front.
